DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-27 are rejected under 35 U.S.C. 102(e) as being anticipated by VanderSpek (US 6,477,591).

As per claims 1-27, VanderSpek teaches an automated method of establishing a file system comprising:

a) establishing a first file system which interfaces with devices by loading software, including a first set of drivers, into memory and initializing said first set of drivers with said devices, said first file system mounted on a root directory comprising a single storage device;

b) allowing input/output functionality within said first file system; and

c) while input/output functionality is made available to said first file system, accessing said single storage device to obtain software, including a second set of drivers, and loading said software into said memory said initializing said second set of drivers with said devices to establish a second file system, wherein said second file system is mounted on a root directory comprising said single storage device and another storage device and wherein said first file system is rendered inactive. (Abstract, 2-17)

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-27 are rejected under 35 U.S.C. 102(b) as being anticipated by McDowell (US 6,389,459).

As per claims 1-27, McDowell teaches an automated method of establishing a file system comprising:

a) establishing a first file system which interfaces with devices by loading software, including a first set of drivers, into memory and initializing said first set of drivers with said devices, said first file system mounted on a root directory

comprising a single storage device;

b) allowing input/output functionality within said first file system; and

c) while input/output functionality is made available to said first file system, accessing said single storage device to obtain software, including a second set of drivers, and loading said software into said memory said initializing said second set of drivers with said devices to establish a second file system, wherein said second file system is mounted on a root directory comprising said single storage device and another storage device and wherein said first file system is rendered inactive. (Abstract, cols. 3-5)
